Capstone Project Announcement for Group 9226

Data Analytics for AI Business
Programme 3_MBAE_S25_MK_AIB_A

Dear Students,

Your capstone project will bring together business analytics, Power BI and Artificial Intelligence to support an executive decision in your assigned business setting. Each team will work as an Executive Analytics Advisory Team and develop an integrated dashboard, presentation and analytical report.

The project materials will be made available through Moodle. Each team package comprises:

• The assigned enterprise dataset in CSV format.

• The team project title, business scenario and reference publication.

• The supporting analytics workbook with dataset metadata and analytical guidance.

• The official team allocation and capstone submission instructions.

Read the Final Capstone Project Description for Group 9226 before starting. It sets out the learning outcomes, analytical scope, deliverables, assessment criteria, submission requirements and presentation expectations.

Submission requirements

• Executive Power BI Dashboard (.pbix).

• Executive Presentation (.pptx), recommended 12-15 slides.

• Comprehensive Analytical Report (.pdf), recommended 20-25 pages.

Submit one integrated package per team through Moodle. A maximum of three files may be uploaded; use the required formats and include supporting model evidence and AI disclosure within the presentation and report.

Important dates

Milestone	Date
Project materials available	To be announced
Submission deadline	To be announced
Executive presentations	To be announced

The instructors will confirm dates through Moodle. Late submissions require official approval in accordance with Graduate School regulations.

Team Preparation and Executive Expectations

Begin by reviewing the assigned business case, dataset definitions and analytical grain. Divide responsibilities across governance, exploratory analysis, Power BI development, AI evaluation, executive recommendations and reporting. Keep a shared work plan and ensure every team member understands the integrated result.

The supplied datasets and reference publications provide a starting point. Your team must verify the measures, conduct its own analysis, build a functioning Power BI dashboard and present its own evidence-based conclusions. Copying the reference publication does not demonstrate completion of the capstone.

All findings must be traceable to your assigned dataset. Distinguish observed synthetic results from proposed actions, test selected AI methods against a suitable baseline, and report weaknesses as clearly as strengths. A model that adds no value is a valid analytical finding when supported by a sound evaluation.

Your executive briefing should explain the business problem, the most important findings, the decision implications and the limits of the evidence. Use clear visuals and practical recommendations. Disclose AI assistance and describe how your team validated the final work.

Raise project questions during class sessions or through the official course communication channels. The instructors will communicate any changes to dates, allocation or assessment through Moodle.

We look forward to reviewing your analytical work and executive presentations.

Best wishes,

Dr. Yasser Aly Yakout Shehata & Dr. Hossam Daoud
