Executive resource portfolio

RESET FILTERS

PORTFOLIO | FINANCIAL | DEMAND / SERVICE | CAPACITY | PRIORITIES | MODEL EVIDENCE

Where should management focus attention, and why?

Year: All | Business unit: All | Operating scenario: All | Region: All

KPI GUIDE

5,000 records | 2024-2026 | 5 business units

Operating profit	Budget execution	Weighted expected ROI	Orders delayed	Associated attention budget
$1.45bn	99.6%	22.2%	8.5%	$150.08m

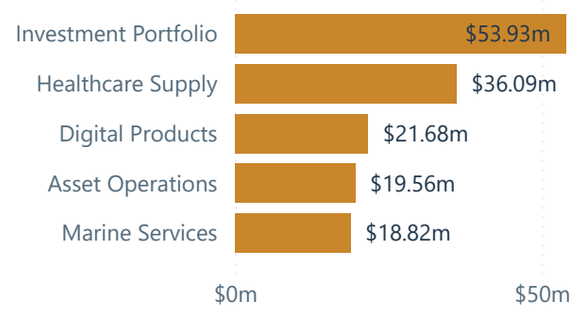

293 supplied exceptions carry $150.1m of budget. 8.5% of orders are delayed; 118,341 service units lack record-level capacity. Investigate constraints before reallocating.

MANAGEMENT ROUTE
Investigate the unit, then the allocation. Validate timing and feasibility before approving any transfer. Associated budget is not savings.

Portfolio trade-offs | right-click a unit to investigate

Business unit	Exp. ROI	Delay %	Gap %	Attention
Digital Products	21.6%	8.6%	3.6%	70
Healthcare Supply	22.6%	8.5%	3.5%	69
Investment Portfolio	22.2%	8.4%	3.3%	60
Marine Services	21.6%	8.2%	3.7%	49
Asset Operations	22.4%	8.4%	3.7%	45

Where flagged budget sits | $m, Review + Reallocate

Allocated budget	Uncovered service units	Review / Reallocate records
$2.52bn	118.3K	293

TEAM 4 / RESOURCE INTELLIGENCE

Demand, inventory & service

RESET FILTERS

PORTFOLIO | FINANCIAL | DEMAND / SERVICE | CAPACITY | PRIORITIES | MODEL EVIDENCE

Where do supply mismatches affect service, relative to the volume at risk?

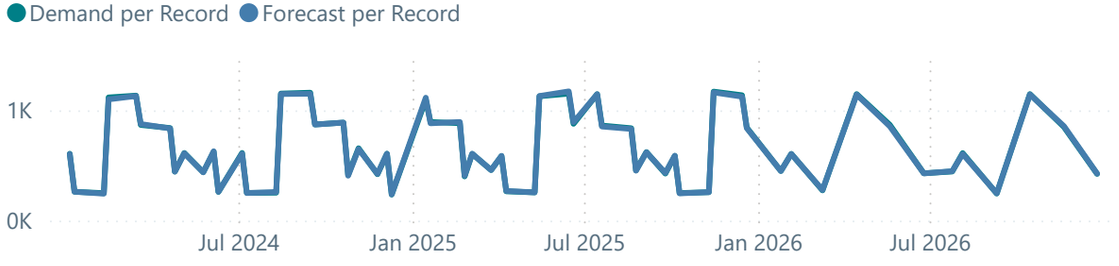

Year: All | Business unit: All | Operating scenario: All | Region: All

KPI GUIDE

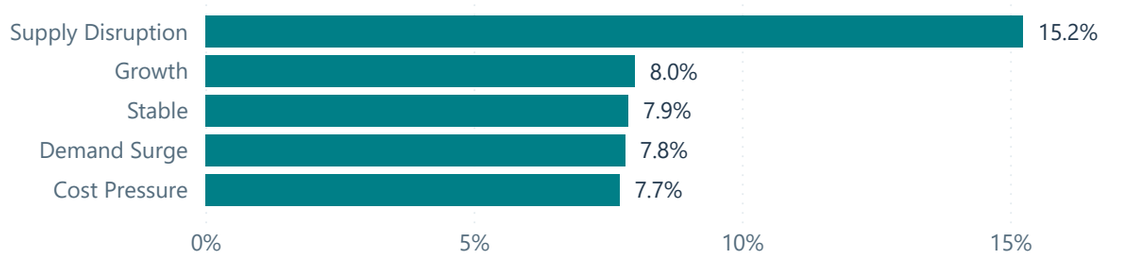

5,000 records | 2024-2026 | 5 business units

Supplied forecast WAPE	Forecast bias (+ over)	Stockouts / demand	Delayed / total orders	Mean inventory observation
7.3%	(0.1%)	1.1%	8.5%	136.2

Demand & supplied forecast per record | observed dates

Order-delay rate by operating scenario

Service severity and volume | compare rates alongside populations

Scenario	Records	Orders	Delay %	Stockouts	Shortage %
Supply Disruption	458	265,581	15.2%	22,944	8.6%
Growth	1,057	678,232	8.0%	2,981	0.4%
Stable	1,988	1,268,819	7.9%	5,266	0.4%
Demand Surge	807	644,969	7.8%	2,976	0.5%
Cost Pressure	690	443,093	7.7%	1,636	0.4%

INTERPRETATION

Inventory is an observation mean, not current stock. WAPE is error magnitude; bias is signed error. Dates are irregular.

Model evidence | demand regression

RESET FILTERS

Does a leakage-aware model improve demand estimates beyond a historical unit baseline?

Year: All | Business unit: All | Operating scenario: All | Region: All

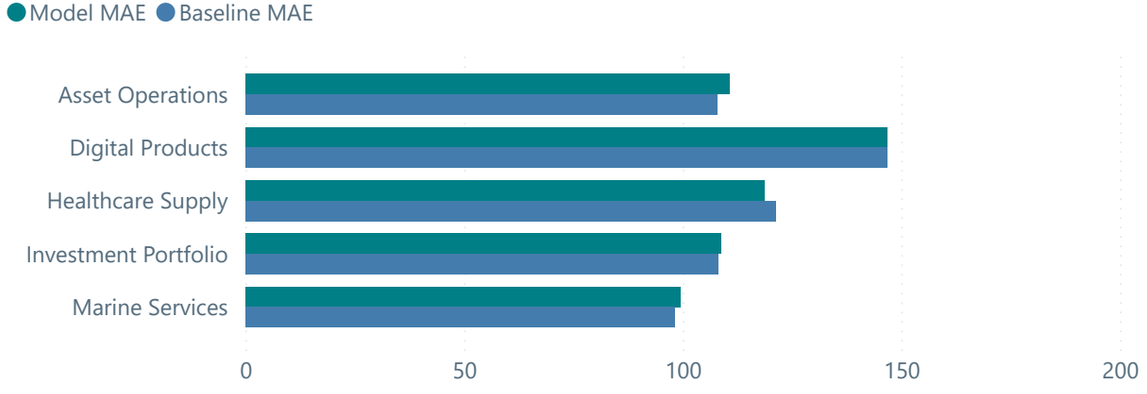

KPI GUIDE

5,000 records | 2024-2026 | 5 business units

Held-out records (2026)	Ridge MAE | units	Baseline MAE | units	Ridge WAPE	MAE difference (+ worse)
996	113.96	113.42	18.3%	+0.54

Historical unit baseline has lower MAE in this selection. Full held-out test: ridge 113.96 vs baseline 113.42 units. No overall predictive improvement demonstrated.

Held-out MAE by business unit | lower is better

EVALUATION DESIGN
Train 2024: 2,004 records. Tune on 2025: 2,000.
Refit 2024-25; held-out 2026: 996. Ridge penalty = 1.
Baseline: training-window business-unit mean.

INPUTS & LIMITS
Only unit, region, initiative and scheduled month.
Planning-time availability is assumed, not logged.
No outcomes, supplied forecasts, scores or IDs used.
Synthetic, irregular observations; no deployment claim.
Filters inspect errors; they do not retrain the model.
